SECURITY CABINETS

AF II

Secure Storage Solution

All offices have a sizeable volume of files and items which need to be kept safe and confidential. For the storage and protection of these sensitive documents and valuables, Fichet-Bauché has built the AF II range of security cabinets.

Did you know?

The locks on AF II cabinets are certified to provide extra protection for the stored documents.

Product Overview

AF II security cabinets are available in three sizes, all designed to offer maximal storage capacity. Thanks to a range of interior fittings, including reinforced shelving for hanging files and lockable compartments, the cabinets can be adapted to meet each client's individual requirements. For ease of access, the doors on AF II security cabinets open to 180°.

AF II cabinets are constructed using sheet steel for the body and double-panelled, 65mm-thick doors. The rounded door bolts are 20mm in diameter and protected by a relocking system which blocks the boltwork in the event of an attack.

Interior fittings (from left): Shelf, lockable compartment

Interior Fittings

AF II can be fitted with shelves for hanging files and a lockable compartment to help you maximise the cabinet's interior space.

Locks

AF II security cabinets have been designed to be equipped with Fichet-Bauché's patented mechanical and electronic locks. The locks are all A2P/EN 1300 certified by CNPP.

The MxB – level B/E – is a high-security mechanical lock. Due to the innovative shape and design of the key, over 10 million different possible keys can be manufactured, making replication extremely difficult. For added security, a blocking system prevents the key from being removed until the door has been properly locked.

The Moneo mechanical combination lock – level C/E – permits several million different codes. Its scramble-upon-opening feature ensures that the dials are automatically reset to 0 after being used.

The Nectra electronic lock – level B/E – generates more than 110 million different code combinations and offers several levels of functionality. The standard version has 1 master code and 7 user codes, wrong-code blocking, time delay and a duress alarm. This can be upgraded with the audit trail function (which records up to 500 events) and a biometric digital fingerprint reader.

MxB + Nectra
MxB + Moneo

Fichet-Bauché Guarantee

Fichet-Bauché products are designed and manufactured in accordance with the ISO 9001 standard for Quality Management Systems, ISO 18001 for Occupational Health and Safety Management Systems and ISO 14000 for Environmental Management Systems. All AF II cabinet components are tested by the Fichet-Bauché laboratory in compliance with the current European standards.
